

Novus BIM Architecture

BUILDING INFORMATION MODELING

We are

a team of enthusiastic innovators.

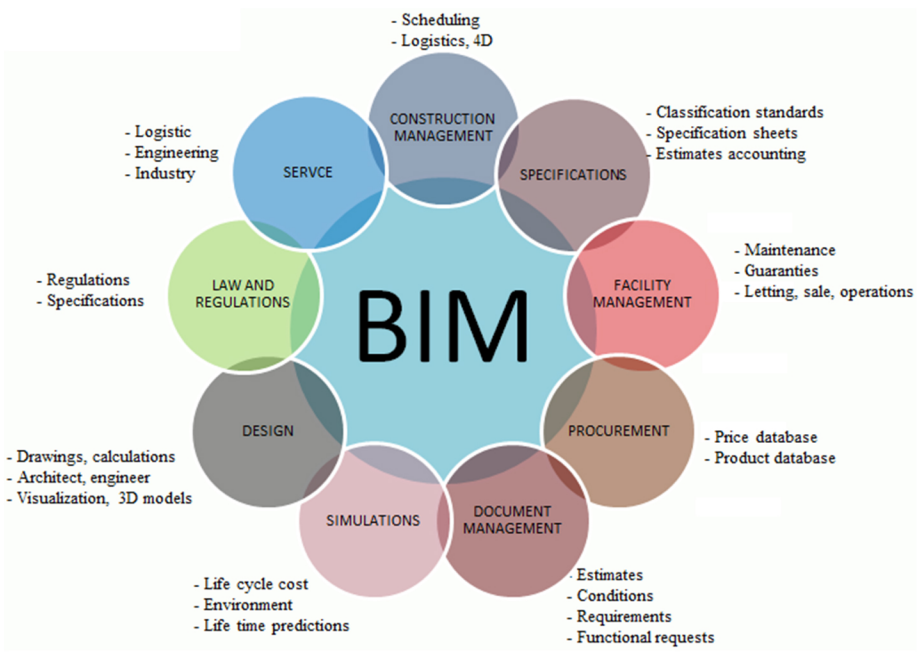

Our mission is to implement new technologies for design, analysis, supervision and construction management.
To realize them, we use all the available contemporary and classical instruments.

BIM IS

a process

for creating and managing information on a construction project throughout its whole life cycle.
As part of this process, a coordinated digital description of every aspect of the built asset is developed, using a set of appropriate technology.

Used for

We can do

- **BIM Management** - NovusBA interprets your project objectives and convert them into a practical BIM protocol and execution plan.
- **BIM Coordination** - NovusBA combines the informational models of all disciplines in a unified model - detect and solve the clashes.
- **Cloud-Based BIM Coordination** - NovusBA enhances the collaboration and improves the project efficiency in real-time from any location,
- **Document Management** - Novus BA is responsible for setting up standard processes for producing, collecting, and approving documents.
- **4d BIM Execution Planning**- Novus BA adds the time dimension to the 3d BIM models, allowing the visualization and simulation of construction sequences.
- **As-built Management**- Novus BA is verifyng periodically the conformity between the executed works and the BIM models on site as an objective party.
